

Aquavital®

*The leading limescale magnet
with megaspin*

In our 20 year old company history we have served over 15.000 households with our products and services. This is what Aquavital® can do for your house or appartement:

Practical Benefits

With its permanent magnet fields Aquavital is transforming the structure of limescale in your water.

- Easier cleaning of surfaces and fittings due to a finer crystal structure of limescale. This neutralized structure has lost its ability to build up encrustations. Chemistry and time for cleaning is reduced significantly.
- Less lime can build up on heating elements e. g. in dishwashers, water heaters, boilers or washing machines. This leads to a lower energy consumption and a longer lifetime of the devices.
- The wear and tear of fittings, surfaces and installations is reduced. The costs for maintenance over time are reduced dramatically.
- Due to the reduction of surface tension of the water less chemistry is needed, for example the consumption of washing powder can be reduced up to 25%.

For the environment

Lower energy consumption, reduced usage of chemistry and longer lifetime of devices protects the environment.

Health Benefits

Aquavital enhances the quality of drinking water. All important minerals remain within the water. Lime is neutralized in a natural and easy way which raises the availability of minerals and enhances the taste and energy of the water.

Showering and bathing is more relaxing because the water feels softer and smoother and a lower amount of shampoo and shower gel is needed.
